

The Aerospace Identification Center was created through Resolution No. 364/2019 of the Chief of Staff of the Argentine Air Force as a result of a restructuring of the Committee for Aerospace Phenomena Study (CEFAE) created on May 6, 2011, raising its organic level and readjusting its capacities to fulfill the new task: "Organize, coordinate and execute the investigation and analysis of events, activities or elements present or originated in the Aerospace of interest; identify their causes and report the conclusions to the pertinent Agencies that require them".

The CIAE has the same staff as the original CEFAE, including its internal and external advisers, and will continue, as a secondary task, to provide the public service on resolution of sightings cases and their corresponding annual publication".
